6 Practice B
(Example answer)
A team of American scientists may have found a way to reverse the ageing process. They fed diet supplements, usually found in health food shops, to elderly rats, which were then tested for memory and stamina. The animals tended to display more active behaviour after taking the supplements, and their memory generally improved. In addition, their appearance became rather more youthful and their appetite tended to increase. The researchers believe that this experiment is quite a clear indication of how the problems of old age may be overcome. They claim that in a few years’ time many people may be able to look forward to a fairly long and active retirement.

(Example paragraph)

In 1889 he was introduced to Florence Rowe, the daughter of a bookseller, while on holiday. After they were married her ideas affected the business: the product range was enlarged to include stationery and books. The Boots subscription library and in-store cafes were also introduced due to Florence’s influence. During the first world war the Boots factories made a variety of products, from sterilisers to gas masks. But after the war Jesse was attacked by arthritis and, worried by the economic prospects, he sold the company to an American rival for £2m. This, however, went bankrupt during the Depression and Boots was then bought by a British group for £6m, and Jesse’s son, John became chairman. The famous No.7 cosmetics range was launched in the 1930s and in the second world war the factories produced both saccharin and penicillin. However, recently the company has been threatened by intense competition from supermarkets in its core pharmaceutical business.
